CloudACS APP

CloudACS™ is a subscription-based access control solution which offers the benefits of a feature-rich access control system, plus the simplicity and reliability of cloud-based technology. Thanks to our advanced controllers, system setup has never been easier as controllers connect automatically to CloudACS™ without any complex configuration. There's no software for you to install or update as there is only one instance of it and it resides on a Microsoft Cloud server where it's updated regularly. Because remote servers handle the computing and storage, there's no server or client software to buy, install or maintain. And you can manage your system from anywhere you have internet access – even from your smartphone!
